

SharedChain is an “Old New Way” to revolutionize supply chains and enable lowest cost same day order/delivery, using patented internet technology and blockchain, and abandoning “Just In Time” delivery in favor of a return to bulk shipment, local warehousing, and bundled store/home deliveries.

SharedChain’s patented internet e-commerce software, sourcing from independent local warehouses and transportation firms provides lowest cost same day delivery. Based on value chain analysis and market tests, we estimate an 18% cost advantage for same day delivery (which Amazon normally cannot execute).

The SharedChain system sets up multiple local markets, with independently operating eBay-like e-marketplace and Uber-like local supply chain platform by using our patented internet technology. The SharedChain platform is a complete supply chain network, integrated via a patented process. Within local markets (about 90 for the U.S., worldwide expansion planned) consumers and retailers can order goods for same day delivery at prices better than Amazon or Walmart can offer.

% difference Total Costs (before retailer profit) from comparison base of SharedChain system		
Same Day	ShareChain	100%
Home	Small Store	113%
Delivery	Walmart	100%
(ordered thru an eRetailer)	Amazon	118%
	eBay	111%

Software developed, system proven in operations

Actual SharedChain transaction from pilot operation in Los Angeles

From order to delivery it took 3 hours 54 minutes for this single transaction

Lower cost, much faster delivery than Amazon or eBay!

Amazon	Grand Order Total: \$252
Amazon Referral Fee Total: 15%*Grand Order Total=\$37.8	
+ Amazon FBA Fee : \$3.75/EA*18=\$67.5	
Amazon Fee Total: \$105.3	
(41.78% of Grand Order Total)	

SharedChain	Grand Order Total: \$252
	- Net Sales Total: \$217.85
SharedChain Transaction Fee + Fulfillment Fee: \$34.15	
(13.5% of Grand Order Total)	
Much cheaper than Amazon!	

SharedChain enables Small Retailers to beat Amazon and Walmart

- Same day delivery or local pick up of larger selection goods than Walmart at lower price than Amazon
- Ideal for fresh, local food delivery
- Cooperation of skilled, independent businesses—not a mega firm that rules all
- Less risk of stockout sales losses or permanent loss of customer that Just In Time delivery entails
- Better for environment: train vs. airplane or truck, bulk and containers versus individual packages
- Safer for people: food and supplies in local warehouses, so less suffering when a pandemic, electrical system outage, or transportation disruption stops long distance just in time delivery

Sourcing from local inventory in local warehousing via SharedChain system is cheaper than just in time delivery from manufacturers with long distance, rush shipping. It is also entails far less risk.

We will add blockchain to better integrate business partners with less IT security risk and another source of readily adjusted fees: the blockchain transaction fee we charge.

	Typical new Supply Chain ICO	SharedChain ICO
Established business	No	Yes
Patent	No	Yes
State of Software Development	Concept only , nothing developed	Completed, in Use System
Probability of business success	Low	High
Size of business when fully developed	Limited to small part of supply chain	Spans all of supply chain plus order, sales, revenue of 10% of product sales

SharedChain will never be a retail brand or competitor to manufacturers, warehouses, transportation companies or retailers: we're the back office, supply chain partner to beat Amazon, Walmart and Megafirms.

SharedChain does not build or own fixed assets, we operate the patented software platform. Our system was proven in a recent market test. Our revenue sources include:

- 4% transaction fee paid by suppliers, 20% fee to local warehouse, logistics, transportation firms
- May add charges for initial access and set up on our system
- May do an Initial Coin Offering and profit from cryptocurrency charges for using our blockchain and increases in the price of the cryptocurrency

SharedChain is an “Old New Way” to use **patented internet technology**, reject “Just In Time” delivery, and return to **bulk shipment, local warehousing, and bundled deliveries** via the **SharedChain system** to achieve **lowest cost same day delivery**

Status Quo

SharedChain Supply Chain System

Time, Cost, Environmental, Risk Improvements

- Leverage supply chain information and infrastructure rather than researching and assembling your own
- Save on eliminated middlemen
- Low cost train and bulk shipping
- Less energy use and environmental damage than air or rush truck delivery
- Local warehouses and transportation firms compete for business in SharedChain system
- Cost savings from bundled delivery from warehouses to DTC
- Easy same day delivery since sourcing from local warehouses
- Cost savings from bundled delivery to retail stores, pick up centers, homes
- Higher inventory costs dwarfed by savings from SharedChain system, bulk and bundled transportation, less stockout sale and lost customer losses

Local Retailers, Pick up centers, Home Delivery

lowest cost same day delivery

SharedChain Overview

SharedChain.io is a patented, integrated e-commerce and shared supply chain system that uses Internet technology and local warehouse-based distribution system with consolidated transportation of products, to dramatically cut supply chain expenses and risks. Sourcing from local warehouses enables same day delivery at lower prices than Amazon or Walmart.

The internet has never been used to connect all parties in a supply chain. SharedChain does, via a patented methodology. SharedChain is not just technology, but a different approach for retail supply chain that abandons “just in time,” long distance rush shipments in favor of old fashioned, but far safer local warehousing with consolidated product/company deliveries that allows lower distribution costs and local same day delivery with much less economic and environmental cost.

At a small cost in extra inventory expense, suppliers can have lower overall distribution costs and far less missed orders and lost customers. The SharedChain system eliminates middleman brokers and make it much easier and less expensive for manufacturers to warehouse their goods in SharedChain’s “local market” areas (such as Los Angeles, eastern Nebraska/western Iowa, etc.). The SharedChain system consolidates shipments of all types of goods from independent warehouses to our local Distribution and Transportation Center, then optimizes local delivery to retail stores (for their resale, or customer pick up at their store) or final consumer home delivery. SharedChain takes care of product distribution for manufacturers, and helps them find retail stores to sell their goods. Sourcing from inventory in local warehousing is cheaper than just in time delivery from manufacturers with long distance, rush shipping. This also entails far less risk of missing a delivery deadline or sale due to stock out.

Retailers use SharedChain to find and order goods located in the SharedChain local market warehouse system at much lower cost than DIY sourcing. Since SharedChain consolidated local warehouse sourcing/sorting/delivery is so economical, small retailers can offer a wider range of products with less on hand inventory, relying on daily deliveries to restock at affordable prices. Retailers can serve as a SharedChain customer pick up center for any product (even if not stocked/sold at the store)--a great way to drive additional traffic to the store and increase sales. Value Chain analysis shows that SharedChain system can save small retailers about 7% of total costs versus sourcing on their own. For in store purchases, Walmart retains a small cost advantage—but by serving as a pick-up site for all goods in the SharedChain system small retailers can beat Walmart by having a wider array of goods, better service, and closer to home, far more pleasant shopping than the Walmart parking and shopping and checkout ordeal. Even small one store shops, can leverage SharedChain to offer prices competitive with Walmart and much faster and cheaper same day delivery of goods than Amazon. Pilot operations in Los Angeles demonstrate both the software and system’s viability: less than 4 hours from order to delivery at a lower price than Amazon or eBay due to the combination of Internet/software functionality and SharedChain’s local warehousing with consolidated delivery.

SharedChain’s 4% transaction fee yields substantial profit with almost no fixed investment.
